APPENDIX D

GAPS IN INTELLIGENCE

At present the main gaps in intelligence on the plants of the rolling stock industry in the USSR are related to the individual plants. Although much general information on these plants is available, there is not much specific information on plans or production by plant and type of railroad cars, inputs, labor force, personalities, floorspace, and equipment. What information is available on the plants lacks corroboration by non-Soviet sources, for clandestine collection and visits of foreign observers have been practically nonexistent.
